

UPS power supply integrated data center

Overview

Explore smart power supply solutions with uninterruptible power supply (UPS) systems, including modular and integrated UPS, ensuring reliable backup power for data centers. A UPS system is a backup power system that provides immediate, uninterrupted power to critical equipment when the primary power source fails or becomes unstable. Unlike generators, which take several seconds to start, a UPS system provides instantaneous power with no delay. Lithium-ion batteries increasingly replace VRLA for longer life, efficiency, and reduced maintenance. Arc flash, harmonic distortion, and poor breaker coordination remain leading vulnerabilities. At Mitsubishi Electric, we understand the risks associated with downtime in data. Secure and sustainable DC power supply solutions for critical infrastructure applications in data centres.
