

Unicom fiber optic cable connected to a router can use LAN

Overview

What you cannot do is plug the fiber optic cable directly into a normal router. This is the part that trips people up. A standard home router has Ethernet ports — those familiar rectangular RJ45 jacks — and a fiber optic cable physically cannot plug into an Ethernet . Here is the topic's answer before we get into the details: yes, you can absolutely use a normal router with a fiber optic internet connection. In fact, the overwhelming majority of fiber internet customers around the world do exactly that — they keep using a standard Wi-Fi router they already own. I have a fibre optic cable incoming to an ONS, on the way out of the ONS is also a fibre optic cable which goes directly into a router which has a fibre optic port. The fiber line terminates at the Optical Network Terminal (ONT), which is typically supplied and installed by the internet service provider.
