

Use Miller pliers when stripping the fiber optic cable

Article Overview

Yes, Miller pliers are specifically designed to strip fiber optic cables safely and efficiently.

Miller offers a range of fiber optic stripping pliers that can handle both the outer jacket and the delicate fiber coatings. For example, the Miller FO-SNC is an all-in-one tool that can strip cable jackets from 1.6–3.0 mm, remove 900 μm tight buffer coatings down to 250 μm , and strip the 250 μm coating down to the 125 μm bare fiber, while also trimming Kevlar® aramid yarn .

The Miller FO103-D-J dual-hole pliers are designed to strip 2–3 mm of the fiber outer sheath and remove the 250 μm coating down to 125 μm bare fiber . Similarly, the FO103-S-250 model is preset for 250 μm fiber coatings and provides precise, clean stripping without further adjustment . These tools feature hardened, ground cutting edges and ergonomic handles to ensure accuracy and reduce the risk of damaging the fiber .

Miller pliers are widely recommended for fiber optic work because they allow consistent, clean stripping of both buffered and coated fibers, which is critical for proper splicing, termination, or connector installation. They are suitable for FTTH (Fiber to the Home) applications and other professional fiber optic installations .

In summary, Miller fiber optic pliers are appropriate and reliable tools for stripping fiber optic cables, capable of handling various fiber sizes and coatings while minimizing the risk of fiber damage.
