

Vietnam Special Optical Cable 2 Cores

Article Overview

Vietnamese 2-core optical cables are high-quality fiber optic cables designed for telecommunications and data networks, manufactured by leading local companies like Viet Fiber, SACOM, and Recoin.

Overview and Structure

A 2-core optical cable in Vietnam typically consists of two optical fibers enclosed in a loose tube, with a central reinforcement element and a PE outer sheath for protection. The cable is designed to provide mechanical strength, flexibility, and water resistance, ensuring durability in both aerial and underground installations. It also includes filling materials to prevent fiber movement and water-blocking components to protect against moisture ingress, extending the cable's lifespan and reliability in harsh environments .

Applications

These 2-core optical cables are widely used in:

- Telecommunications networks for long-distance and local connections
- FTTH (Fiber to the Home) deployments
- CATV and CCTV systems
- Data processing and local area networks (LANs)
- Industrial and government IT projects requiring reliable fiber connectivity
