

Waterproof Distribution Box Outdoor Specifications

Article Overview

Waterproof outdoor distribution boxes are designed with sealed enclosures, IP65/IP66 or NEMA 3R/4 ratings, durable materials, and internal busbars and breakers to safely distribute power in wet or harsh environments.

Key Specifications

Enclosure Ratings: Outdoor distribution boxes must be rain-tight to comply with NEC Article 312 for wet locations. Common ratings include IP65/IP66 for dust and water protection, or NEMA 3R/4 for weatherproof and rain-tight performance . IP65 protects against dust and low-pressure water jets, while IP66 withstands strong water jets and heavy rain . NEMA 3R/4 ensures compliance with U.S. electrical codes for outdoor installations . **Materials:** Boxes are typically fabricated from high-impact polycarbonate, ABS plastic, or metal (steel or aluminum) to ensure durability and resistance to environmental stress . Reinforced doors and sealing gaskets enhance waterproof performance. **Internal Components:**

- **Bus Bars:** Copper or aluminum conductors distribute power to branch circuits.
- **Overcurrent Protection Devices:** Circuit breakers or fuses for each branch.
- **Main Disconnect:** Required for systems over 100A per NEC 312.8.
