

What inspection items should be done on the distribution box

From standard 1U to 8U sizes to
fully customized Non-standard enclosures.

Article Overview

A thorough inspection of a distribution box includes visual checks, electrical testing, grounding verification, cleaning, and documentation to ensure safety and proper operation.

Visual and Physical Inspection

- Check the distribution box for mechanical damage, intact doors, and proper seals, ensuring no water or abnormal liquids are present inside or around the box .
- Verify nameplates, labels, ID tags, and warning signs are correct and legible .
- Inspect circuit breakers, fuses, and surge protection devices for proper operation and signs of burning, corrosion, or damage .
- Ensure internal cabling, bus bars, and connectors are neat, secure, and correctly phased .
- Confirm ventilation openings and heat dissipation holes are clean and unobstructed .
- Check heaters, desiccants, or dehumidifiers if installed, and replace or maintain as needed .

Electrical Testing

- Measure three-phase voltage balance using a multimeter (within $\pm 5\%$) and check insulation resistance between phases and earth .
