

What is a PDU in a distribution box

Overview

A power distribution box (also called PDU or distro) directs electricity from a main source to multiple circuits. It acts like a hub or traffic controller, managing power flow to different areas or devices. Think of it as a heavy-duty, purpose-built power strip designed for data centers, server rooms, and other environments where reliable power delivery is. A power distribution unit (PDU) is a device fitted with multiple outputs designed to distribute electric power, especially to racks of computers and networking equipment located within a data center. This is why many. PDU stands for "power distribution unit. " A PDU is essentially a large power strip with multiple electrical outlets for plugging in IT equipment. Key components include circuit breakers, fuses, bus bars, and internal wiring for safety and. Given 24x7 operational requirements and growing concern about power efficiency, the power distribution unit (PDU) has become an important part of the data center infrastructure.
