

What is the material of the white network server rack

Overview

The cold-rolled steel material of this cabinet allows for the secure mounting of servers, switches, A/V, and other related devices. This network cabinet is available in a 12U rack. TECHNICAL SPECS - Crafted from cold-rolled 1.2mm steel with welded frames and finished in a sleek white, the NavePoint 22U server cabinet measures 43"H x 23". Designed for 19-inch standard equipment with a weight capacity of 130 lbs and a max rail depth of 21". EASY & CUSTOMIZABLE. A server rack is a set of shelves and posts designed to store multiple computing devices. Open-frame racks provide sufficient air circulation to cool equipment and easy access to all operating. A well-chosen white server rack for home office or small business use should support at least 1,500 lbs, offer adjustable mounting rails, and include cable management features. Look for powder-coated steel construction to resist scratches and corrosion. If noise is a concern, consider enclosed. Ventilation and Security: one-built-in top fan (with power cable) and flow through ventilation to prevent overheating of the network rack.
