

What router is compatible with gigabit fiber optic internet

Article Overview

To fully utilize gigabit fiber optic internet, you need a fiber-ready router with Gigabit Ethernet ports, Wi-Fi 6 or 7 support, and compatibility with your Optical Network Terminal (ONT).

Key Features to Look For

- **Gigabit Ethernet Ports:** Ensure the router has at least one Gigabit WAN port to connect to the ONT and multiple Gigabit LAN ports for wired devices. Some high-end routers offer multi-gig or 10G ports for future-proofing .
- **Wi-Fi Standard:** Wi-Fi 6 (802.11ax) or Wi-Fi 7 (802.11be) is recommended to handle high-speed fiber connections wirelessly, reduce latency, and support multiple devices simultaneously .
- **Coverage and Antennas:** For larger homes or offices, routers with multiple internal or external antennas provide better range and signal stability across multiple floors .
- **Device Capacity:** High-performance routers can manage dozens to hundreds of devices without performance drops, which is important for smart homes or offices .
- **Advanced Features:** Look for LAN aggregation, Quality of Service (QoS), security features, and parental controls to optimize network performance and safety .

Recommended Routers

- **Netgear Nighthawk RS700S:** Wi-Fi 7, tri-band, supports multi-gig speeds up to 10 Gbps, covers up to 3,500 sq. ft., and handles up to 200 devices
