

Where to plug in the optical module of the Huijue switch

Article Overview

To connect an optical module to a Huijue switch, ensure compatibility, follow ESD precautions, insert the module correctly, and connect the optical fibers securely.

Step 1: Safety and Preparation

- Avoid direct eye exposure to the optical module or fiber ends, as they emit laser radiation that can cause eye damage .
- Wear an anti-static wrist strap or ESD gloves and ensure it is properly grounded to prevent electrostatic damage to the module .
- Check module compatibility: Use only certified optical modules for your Huijue switch. Ensure the module's wavelength and type (single-mode or multimode) match the existing network setup .

Step 2: Installing the Optical Module

- Remove the new optical module from its packaging and verify its orientation.
- Gently insert the module into the optical port until you hear a click. If it does not fit, try turning it over and reinserting .
- Cover any unconnected optical modules with dust plugs to prevent contamination .

Step 3: Connecting Optical Fibers

- Identify the optical fibers to be connected and remove dust caps from both the fibers and the module .
