

Which router uses the fiber optic cable

Article Overview

Routers provided with fiber optic service are typically designed to handle high-speed connections, but their performance depends on compatibility with gigabit speeds and modern Wi-Fi standards.

Understanding the Provided Router

When you subscribe to fiber optic internet, your Internet Service Provider (ISP) often supplies a router or an Optical Network Terminal (ONT) with a built-in router. These devices are specifically configured to work with fiber connections, converting the light signals from the fiber cable into data your home network can use. Most modern ISP-provided routers support gigabit Ethernet speeds and are compatible with Wi-Fi 6 or Wi-Fi 6E, ensuring they can handle the high bandwidth offered by fiber internet .

Key Features to Expect

- High-speed Wi-Fi standards: Wi-Fi 6 or Wi-Fi 7 routers maximize fiber speeds and improve performance in crowded environments .
- Gigabit Ethernet ports: Essential for wired connections to desktops, smart TVs, or gaming consoles .
- Dual-band or tri-band support: Helps distribute devices across multiple frequencies to reduce congestion .
- Advanced security protocols: Many routers include built-in firewalls, WPA3 encryption, and optional security subscriptions .
