

Wiring with power distribution box with start-up function

Article Overview

A power distribution box with a start-up function combines protective devices, relays, and control wiring to safely distribute power and enable controlled device startup.

Components Required

- Main input breaker: Typically a double-pole MCB or main switch to control incoming power .
- Output breakers: Single-pole or double-pole MCBs for each load to provide overcurrent protection .
- RCCB (Residual Current Circuit Breaker): For safety against leakage currents .
- Relays or motor starters: To implement the start-up function, allowing devices to be powered on remotely or automatically .
- Auxiliary contacts and diodes: For isolating control signals and preventing interference between circuits .
- Wiring terminals and busbars: For organized connections of power and control circuits .

Wiring Procedure

- Main Power Connection: Connect the incoming AC supply to the main breaker. Ensure the neutral and ground are properly connected to the neutral bus and ground bus .
